DECCAN AI — PAID OPPORTUNITY

Physical AI Data Collection Project

We have an exciting paid opportunity for you — a **Physical AI egocentric data collection project** focused on household robotics and AI.

Dear **PRAJWAL SUNIL PATI**,

We are onboarding candidates for a **household robotics / AI data collection project**. You'll record natural household activities using a head-mounted mobile phone setup — helping train next-generation physical AI models.

Tasks include everyday activities such as kitchen work, laundry, object organisation, and moving between rooms while handling objects.

PAY

₹2,000 per hour

This is an **introductory rate for submissions made on or before 21st June 2026**. After that, standard rates apply. Register early to lock it in.

HEAD MOUNT — REQUIRED BEFORE BOOKING

A **head-mounted phone holder is mandatory** for this project. Place your order or ensure you already have one before booking your slot — the cost will be **reimbursed at ₹400** upon task submission.

During the onboarding call, you will be asked to **physically show the head mount on camera** — this is required to move forward with the next step of project onboarding.

These links show the configuration we're looking for. Shop for a similar one from any platform or local store near you that delivers or is available at the earliest — [Ref 1](#), [Ref 2](#), [Ref 3](#).

BASIC REQUIREMENTS

Smartphone with minimum **720p recording capability**

Stable internet connection for uploading recordings

Comfortable performing or recording normal household activities

Able to follow task instructions and repeat tasks when re-recording is needed

Good communication, responsiveness, and ability to follow confidentiality requirements

Preferred home setup: Modular kitchen (chopping board, countertop, microwave/oven, refrigerator), dining area, living room, washing machine and laundry area, and indoor walking space across multiple rooms. A balcony, staircase, or corridor is a bonus.

YOUR NEXT STEP

Book Your Onboarding Session

A short online session where you'll receive full project instructions and a task walkthrough. Your head mount will be verified on camera — completing this gets you fully onboarded and ready to start.

Please book your slot only after you have placed an order for the head mount or already have one with you — the project kicks off immediately after the onboarding calls and the head mount must be available to start the project.

[Book My Slot →](#)

More slots will be opening soon — but early slots fill fast. Book now to secure your spot and get into the project sooner.

Looking forward to having you on board.

Regards,

Deccan AI Experts
